Open to relocation to Poland or elsewhere in the EU

PROFESSIONAL SUMMARY

DevOps engineer with 4+ years of professional experience, 3+ of them in DevOps and cloud infrastructure across AWS, Azure and GCP. Sole owner of on-premises to cloud migrations for enterprise MarTech and banking platforms, from assessment and target architecture through cutover and post-migration validation. Comfortable at the point where infrastructure meets application behaviour, tracing failures across cluster scheduling, node affinity, storage and service networking rather than escalating them. Day-to-day stack is Kubernetes across managed and self-managed clusters, Docker and Helm, Terraform and Ansible, with production on-call and observability experience under contracted SLA.

TECHNICAL SKILLS

PRIMARY - USED IN PRODUCTION

Kubernetes	EKS, GKE, kubectl self-managed clusters, Helm, Docker
Cloud - AWS	EC2, VPC, IAM, S3, RDS, ECS, ELB, Auto Scaling, Route 53, CloudWatch
Cloud - GCP	GKE, Compute Engine, Cloud Storage, Cloud Monitoring
Infrastructure as Code	Terraform, Ansible
CI/CD	Jenkins, GitLab CI/CD, Azure DevOps Pipelines
Observability	Prometheus, Grafana, CloudWatch, GCP Cloud Monitoring
Systems & Scripting	Linux (RHEL / Ubuntu), Windows Server, Bash, Python

ALSO WORKED WITH

Azure	AKS, VNet, Azure Monitor
GitOps & Registry	Argo CD, GitHub Actions, Harbor
Databases	PostgreSQL, MySQL, Oracle, MS SQL

PROFESSIONAL EXPERIENCE

XERAGO

Senior Associate (DevOps Engineer) - MarTech

Chennai, India
Jul 2025 - Present

- Sole owner of enterprise MarTech platform migrations from on-premises infrastructure to containerised cloud environments, running assessment, target architecture, build, cutover and post-migration validation across development, testing and production.
- Ran a digital experience analytics and session-replay platform whose components require both Windows and Linux nodes, using node affinity, OS-specific scheduling and cross-platform service networking to keep the full workload on one shared Kubernetes cluster rather than two.
- Debugged the cluster through bring-up, working through pods stuck in CrashLoopBackOff and NFS-backed persistent volumes failing to mount on the Windows nodes, until the mixed-OS workload ran end to end.
- Replaced manual recovery of failed deployments on self-managed kubectl clusters with a self-healing pipeline that detects failure, retries and rolls back automatically, and troubleshoot scheduling failures that leave pods Pending so environments stay recoverable without engineer intervention.
- Closed the manual handoff between the infrastructure and web teams on a banking client's website programme by automating build, content deployment and environment configuration through to production.
- Wrote Bash and Python tooling for environment setup, log collection, health checks and routine platform tasks, adopted across the team to remove repetitive manual work from daily operations.

PDSVISION

Junior PLM Consultant

Chennai, India
Jan 2023 - Feb 2025

- Ran ThingWorx IoT and Windchill PLM across on-premises data centres and public cloud on AWS and GCP, owning availability, scalability and release automation for two customer environments, including hybrid deployments spanning both.
- Met customer disaster-recovery requirements by designing multi-AZ high-availability topologies on AWS, provisioned with Terraform and configured with Ansible across EC2, VPC, IAM, S3, RDS, ECS, ELB, Auto Scaling, Route 53 and CloudWatch, and proving them through scheduled failover tests against defined RTO and RPO targets.
- Held first-line responsibility on a rotating 24/7 on-call for a production IoT web application, triaging incidents from alert to root cause, with no major escalation during the support period and vendor cases driven to closure with AWS and GCP support.
- Investigated a sudden failure in metric collection on the production IoT platform by comparing inbound and outbound traffic against baseline, identified a traffic spike exhausting the allocated resources as the cause, and raised the capacity increase that restored collection.
- Built centralised monitoring and alerting with Prometheus, Grafana, CloudWatch and GCP Cloud Monitoring across 10+ instances, covering dashboards, alert thresholds, log aggregation and health checks, and met the contracted availability SLA throughout.
- Removed the two manual steps that slowed every Windchill release - configuration values entered by hand on the Windows hosts and database schemas created manually - by scripting both into a repeatable deployment pipeline, cutting rollout time by roughly 30%.

NCR CORPORATION

Trainee

Chennai, India

Jul 2022 – Dec 2022

- Carried out functional and performance testing of assembled ATM systems and completed final verification of build and quality documentation before dispatch.

PROJECTS

HCL Discover – Cloud-Native Deployment on Azure

AKS · Helm · Jenkins · Argo CD · Harbor · Docker

- Packaged the platform as Helm charts held in Git and published Docker images to a Harbor private registry, giving every environment a versioned, reproducible release artefact.
- Automated delivery with Jenkins for CI and Argo CD for GitOps continuous deployment, so cluster state is reconciled from Git instead of applied by hand.

HCL Unica – Cloud-Native Deployment on Google Cloud

GKE · Helm · GitLab CI/CD · Argo CD · Harbor · Docker

- Moved the HCL Unica marketing platform off a traditional on-premises install onto Google Kubernetes Engine as a containerised, cluster-based architecture.
- Made promotion between environments repeatable rather than bespoke, with GitLab CI/CD and Argo CD driving deployments against Helm charts and Harbor-hosted images.

Banking Website Migration to Adobe Edge Delivery Services

Adobe EDS · Azure DevOps Pipelines · Azure Repos

- Migrated a banking client's website estate from on-premises hosting to Adobe Edge Delivery Services, covering build, content deployment and environment configuration across staging and production.
- Built the delivery pipeline in Azure DevOps with source in Azure Repos, cutting the release cycle from two days to under two hours.

PTC Windchill PLM – Multi-Cloud Infrastructure

AWS · GCP · Terraform · Ansible · Linux

- Built the GCP side of a dual-provider PLM estate covering compute, storage, networking, identity and database layers, mirroring the AWS topology so both environments stayed consistent.
- Kept both providers rebuildable from code, handling application configuration, deployment and patching through Ansible playbooks.

EDUCATION

B.E. Mechanical Engineering

Muthayammal Engineering College, Namakkal, India

Sep 2018 – Jun 2022

GPA 7.63 / 10

ADDITIONAL INFORMATION

Languages – English B2 (Upper-Intermediate) | Tamil (Native)

Work authorisation – Indian national, requires employer-sponsored work permit; available to relocate at short notice.

I hereby give consent for my personal data included in my application to be processed for the purposes of the recruitment process, in accordance with Regulation (EU) 2016/679 of the European Parliament and of the Council of 27 April 2016 (GDPR).
