

PROFESSIONAL SUMMARY

DevOps Engineer with **4+ years of experience** (3+ in DevOps) building and running cloud infrastructure on **AWS, Azure and GCP**. Hands-on with Kubernetes (EKS, AKS, GKE, kubeadm), Terraform, Docker and Helm, and CI/CD pipelines in Jenkins, Azure DevOps, GitLab CI/CD and Argo CD. Delivered on-premises to cloud migrations for enterprise and banking platforms, with production on-call and observability experience. Willing to relocate to Poland or elsewhere in the EU.

TECHNICAL SKILLS

- **Cloud Platforms** – AWS, Azure, GCP
- **AWS** – EC2, VPC, IAM, S3, RDS, EKS, CloudWatch
- **Azure** – AKS, Azure DevOps, VNet, Azure Monitor
- **GCP** – GKE, Compute Engine, Cloud Storage
- **Kubernetes** – EKS, AKS, GKE, kubeadm
- **Containers** – Docker, Helm, Harbor
- **CI/CD** – Jenkins, Azure DevOps, GitLab CI/CD
- **GitOps** – Argo CD, GitHub Actions
- **Infrastructure as Code** – Terraform, Ansible
- **Observability** – Prometheus, Grafana, CloudWatch
- **Databases** – Oracle, PostgreSQL, MySQL, MS SQL
- **Operating Systems** – Linux (RHEL / Ubuntu), Windows

PROFESSIONAL EXPERIENCE

XERAGO | Chennai, India

Senior Associate (DevOps Engineer) – MarTech | Jul 2025 – Present

- Currently delivering the migration of enterprise MarTech platforms from on-premises infrastructure to cloud-hosted, containerised environments **end to end** - sole owner of assessment, target architecture, build, cutover and post-migration validation across environments spanning development, testing and production.
- Built the CI/CD pipeline for a **banking client's website migration from on-premises hosting to Adobe Edge Delivery Services (EDS)**, automating build, content deployment and environment configuration across staging and production and removing manual handoffs between the infrastructure and web teams.
- Wrote **Bash and Python automation scripts** that removed repetitive manual work from the team's day-to-day operations - covering environment setup, log collection, health checks and routine platform tasks - shared across the team as reusable tooling.
- Deployed and operated a **digital experience analytics and session-replay platform** on Kubernetes using Helm charts across a **mixed Windows and Linux node pool cluster** - the product requires both node types, so handled OS-specific scheduling, node affinity and cross-platform networking to run the full workload on shared infrastructure.
- Maintain and deploy the team's internal applications on **self-managed kubeadm Kubernetes clusters** through a **self-healing CI/CD pipeline** with automated failure detection, retry and rollback, cutting manual intervention on failed deployments and keeping environments recoverable without engineer involvement.

PDSVISION | Chennai, India

Junior PLM Consultant | Jan 2023 – Feb 2025

- Deployed and operated ThingWorx IoT and Windchill PLM applications across **both on-premises data centres and public cloud (AWS and GCP)**, supporting 2 customer environments with responsibility for availability, scalability and release automation, including hybrid deployments spanning both.
- Provisioned and managed AWS infrastructure - **EC2, VPC, IAM roles and policies, S3, RDS, ECS, ELB, Auto Scaling groups, Route 53 and CloudWatch** - provisioned through **Terraform** and configured with **Ansible** for PLM and IoT workloads, including multi-AZ high-availability topologies and disaster-recovery configurations validated through scheduled failover testing against defined RTO/RPO targets.
- Automated Windchill deployment and customisation workflows using shell scripting and CI practices, reducing a previously manual release process to a repeatable pipeline and cutting rollout time by **30%**.
- Set up centralised monitoring and alerting with **Prometheus, Grafana, CloudWatch and GCP Cloud Monitoring** across **10+** instances - dashboards, alert thresholds, log aggregation and health checks - sustaining **98% uptime** against SLA.
- Provided 24/7 operational support on a rotating on-call basis for a production IoT web application, handling incident triage, log analysis and resolution with **zero major escalations** during the support period, and raised and tracked **AWS and GCP support cases** through to closure.

- Assembled ATM units end to end, carried out functional and performance testing of the assembled systems, and completed final verification of the accompanying build and quality documentation before dispatch.

PROJECTS

HCL Discover - Cloud-Native Deployment on Azure - AKS, Helm, Jenkins, Argo CD, Harbor, Docker, Windows + Linux nodes

- Deployed and operated HCL Discover, a digital experience analytics and session-replay platform, on an **Azure Kubernetes cluster running mixed Windows and Linux node pools** - the product requires both node types, so handled OS-specific scheduling, node affinity and cross-platform networking on shared infrastructure.
- Packaged the application as Helm charts version-controlled in GitHub, built and published Docker images to a **Harbor** private registry, and automated release through **Jenkins for CI and Argo CD for GitOps-based continuous deployment**.

Banking Website Migration to Adobe Edge Delivery Services - Adobe EDS, Azure DevOps Pipelines, Azure Repos

- Migrated a **banking client's website estate from on-premises hosting to Adobe Edge Delivery Services (EDS)**, covering build, content deployment and environment configuration across staging and production.
- Built the delivery pipeline in **Azure DevOps** with source hosted in Azure Repos, replacing manual release steps and cutting the release cycle from two days to under two hours.

HCL Unica - Cloud-Native Deployment on Google Cloud - GKE, Helm, Jenkins, Argo CD, Harbor, Docker

- Delivered the cloud-native deployment of the HCL Unica marketing platform on **Google Kubernetes Engine**, moving the product from a traditional on-premises install to a containerised, cluster-based architecture.
- Maintained Helm charts in GitHub and Docker images in **Harbor**, with **GitLab CI/CD and Argo CD** driving automated, repeatable deployments across environments.

PTC Windchill PLM - Multi-Cloud Infrastructure - AWS, GCP, Terraform, Ansible, Linux

- Built and maintained the **AWS and GCP services** underpinning PTC Windchill PLM, covering compute, storage, networking, identity and database layers across both providers.
- Provisioned the infrastructure as code with **Terraform** and handled application configuration, deployment and patching through **Ansible** playbooks, keeping environments consistent and rebuildable.

ThingWorx IoT Platform - Operations & Monitoring - GCP, AWS, Prometheus, Grafana, CloudWatch, Cloud Monitoring

- Operated a production ThingWorx IoT platform on **GCP and AWS**, provisioned with Terraform and configured with Ansible, with responsibility for availability and release automation.
- Ran centralised monitoring and alerting for these environments and owned the support ticket queue end to end, from incident triage through to resolution with internal teams and cloud vendor support.

EDUCATION

Bachelor of Engineering, Mechanical Engineering | Muthayammal Engineering College, Namakkal, India

Sep 2018 – Jun 2022 | GPA: 7.63 / 10

LANGUAGES

English – B2 (Upper-Intermediate) | Tamil – Native
